FEDERAL COMMUNICATIONS COMMISSION  
OFFICE OF SECRETARY

JUN 9 7 20 AM '95

26 May 1995

Commissioner Andrew Barrett  
Federal Communications Commission  
1919 M Street NW  
Washington, DC 20554

DOCKET FILE COPY ORIGINAL

Dear Commissioner Barrett:

Smooth and easy transition from the current analog POTS telephone system to widespread use of ISDN and digital services are too important to impose arbitrary obstacles such as requiring multiple subscriber line charges (SLC).

I urge the Commission to restore the single SLC and do everything within your purview to boost the availability of higher bandwidth digital telephone services.

ISDN and higher bandwidth digital telephone services are vital to the United States and our:

- global competitiveness
- economic growth
- educational opportunities
- technological development
- entertainment and leisure possibilities
- information economy
- communications efficiency
- flexibility
- National Information Infrastructure

At a time when we our transportation infrastructure is overwhelmed and our skies are polluted, why would you discourage telecommuting? At a time when the "information age" offers us so many possibilities to improve industry, education, economic efficiency, entertainment and our way of life, why would you move us backward?

The nation is watching and depending on you. Thank you for turning us toward the future and moving us forward.

Regards,

Neil Shea  
Director  
Alteris International

FCC MAIL ROOM

William Caton, Secretary  
Federal Communication Commission  
1919 M Street, NW, Washington, D.C. 20554

June 2, 1995

Dear Mr. Caton:

RC Labs would like to join the California ISDN User's Group in support of a return to single subscriber line charges (SLC) for Integrated Services Digital Network (ISDN) services. As a small, Silicon Valley based, communications software company, RC Labs feels that the single SLC is the superior alternative to the multiple SLC which is currently under review by the Commission.

ISDN services are essential to the continued growth of affordable, world-wide communication systems. The introduction of ISDN a decade ago expanded the potential of digital networks to benefit every facet of American life.

The FCC ruling requiring multiple subscriber line charges needlessly limits the potential of ISDN services. Because ISDN is essential to the future of the "Information Superhighway," RC Labs urges the Commission to restore the single SLC for the ISDN services.

Sincerely,

William Gaynor  
Technical Engineer, RC Labs

cc: Chairman and Commissioners, FCC

DOCKET FILE COPY ORIGINAL

Secretary William Canton  
Federal Communication Commission  
Washington, D.C.

May 28, 1995

Dear Mr. Canton:

I am writing you to urge you to do whatever it takes to restore SINGLE subscriber line charges for ISDN [Integrated Services Digital Network].

To provide only MULTIPLE subscriber line service would be discriminating against large numbers of Americans. ISDN has the capability to reach Americans of every kind. But without it they may become isolated and grow more separatist.

Please help America to grow united by allowing freedom and ease of access to ISDN for every citizen at the lowest possible cost.

This is so important to our well-being, I would like to know the reasons if the Commission votes against my position.

Thank you for your consideration.

Sincerely,

Sam Standing
